

# Get the Right Results in Real Time

**At no cost from CliniSync, receive results and reports directly into your patients' records from hospitals that are part of the CliniSync community.**

## Here's what clinicians around Ohio have to say...

*The nicest thing is that when a patient goes to the hospital – whether ER, inpatient or outpatient – the labs they have done there go directly into their patient chart, and I'm able to pull them up with a few clicks of a button. So, I'm not gunging up my chart with a lot of information. It's faster, more complete, and I also can trend and graph a patient's progress over time.*

**Sandra Schubert, M.D.,  
Superior Med in Cambridge**  
[Story](#)

*While we had a much better system, it's still not as good as the results delivery from CliniSync. We knew it was coming, but we didn't know how good it would be. The time savings and efficiencies gained are immeasurable. Staff members can address issues immediately with a patient on the phone. They can see the lab results and can communicate back to the patient quickly.*

**Cindy Volk, RN, Cardiovascular  
Medicine Associates outside of  
Cleveland** [Story](#)

### Quick Stats

- 149 contracted hospitals
- 119 "live" hospitals
- 1,200 practices
- 4,800 physicians
- 400 long-term, post-acute care

*CliniSync came along and allows us to be able to pull in results electronically, directly into patient records. We're getting all results from our local hospitals – so all their lab results, pathology results, radiological results are all coming in now electronically into our system.*

**Michael C. Josey, M.D., Grand Lake  
Primary Care at St. Marys** [Video](#)

*Electronic communications – getting labs, x-rays – has helped me greatly over the last couple of years. You get the results a lot quicker, which goes to quicker diagnosis, treatment, and getting the patient better more quickly.*

**James V. Gasparine, M.D.,  
Orthopaedic Associates of  
Zanesville** [Video](#)

### What You Can Receive

- Electronic registration
- Lab results
- General chemistry
- Microbiology
- Blood bank
- Pathology
- Transcribed reports
- Radiology reports

*Results are coming right into the record. The provider is able to see the data; it comes in as discrete data. So we are able to run reports on this data if we need to see who of our diabetics has an A1C above 7, or who has cholesterol out of range, so we can do population management with that data. If the nurse is needing to talk to a client about their results, he or she can go right to that record.*
