

Contribute allows practices, hospitals and other care providers to publish a patient's clinical data so other treating care providers can view it.

What is Contribute?

- Contribute is a CliniSync solution that allows community providers to securely and seamlessly share patient data through a Continuity of Care Document (CCD).
- The CCDs you submit will be published to the Community Health Record, where the patient's data is accessible.
- CliniSync has expanded options available to care providers to publish data to assist with your technology needs and budget.
- Streamlines and reduces the cost of sharing data across disparate systems.
- Hospitals can leverage this same service to share summaries of care for their employed practices.
- CliniSync will assist you in selecting from different technology options to meet your specific needs.

What are the benefits of Contribute?

- Helps to create a collaborative network for Ohio's hospitals, practices, physicians, and other care providers, such as EMS personnel, pharmacists, home care specialists and social service agencies.
- Contributes to a more comprehensive and timely picture of a patient's health for safe, quality care.
- Facilitates the ability for clinicians to coordinate care required by new value-based, patient-centric payment models.
- Makes transitions of care easier through real-time, electronic delivery of patient health information, such as in long-term care.
- Lays the foundation for the analysis of population health for a managed group of patients.

We're all working together to create a robust system of patient data that allows you to view encounters over time - not just at hospitals - but at specialists' and other facilities as well.
